Hiring Manager

Cadera Systems Vietnam Co., Ltd
544/17-19 Lac Long Quan, Phuong Hoa Binh, Quan 11, HCMC

Re: Application for PCB Design Engineer (Ky Su Thiet Ke Phan Cung)

Dear Hiring Manager,

I am writing to apply for the PCB Design Engineer position at Cadera Systems Vietnam as advertised on Vieclam24h. With over 15 years of hardware design and PCB layout experience at Cadera Systems (USA), I believe I am well positioned to contribute to the Vietnam branch.

How my experience maps to your requirements:

- High-speed multi-layer PCB design: I have designed and delivered numerous high-density, high-speed PCBs for IoT, consumer electronics, telecom, and automotive clients, with deep expertise in signal integrity, power distribution, and DFM.
- PCB library management: I am proficient in creating and managing symbols, footprints, and 3D models across OrCAD/Allegro, Altium Designer, and KiCad.
- Schematic design & component selection: I routinely analyze and select digital/analog components based on performance, cost, and feature trade-offs, and perform full schematic capture.
- Hardware debug & manufacturer collaboration: I have extensive experience in board bring-up, signal measurement, and debug, as well as working directly with PCB fabricators and assembly houses to optimize manufacturability.
- English communication: I work daily with US-based engineers and clients in English, both written and spoken.

I graduated with a Bachelor of Engineering in Electronics from Ho Chi Minh City University of Technology (HCMUT) and currently reside in Quan 11, HCMC - conveniently located near the office.

I welcome the opportunity to discuss how my skills can contribute to Cadera Systems Vietnam. Thank you for your time and consideration.

Sincerely,

Vu Phan
