Re: Application for Hardware / Firmware Engineer Position

Dear Hiring Manager,

I am writing to express my interest in the Hardware / Firmware Engineer position at [Company Name]. With over 16 years of experience delivering end-to-end product development across IoT, consumer electronics, telecom, and automotive industries, I am confident in my ability to contribute effectively to your engineering team.

Throughout my career, I have specialized in the full product lifecycle - from system specification and schematic design through PCB layout, prototyping, board bring-up, and production. I am proficient in MCU, SoC, and FPGA-based system design, with deep hands-on experience in high-speed interfaces such as PCIe, DDR, and Ethernet, as well as embedded protocols including UART, SPI, and I2C.

At Cadera Systems, where I have worked since 2011, I have architected custom hardware solutions for a diverse range of clients and led board bring-up and validation on complex multi-layer PCBs. In parallel, I develop bare-metal and RTOS-based firmware for embedded platforms and build cross-platform test tools and applications in C#, Dart/Flutter, and Node.js to support hardware validation and production.

Earlier, at Acronics Systems, I developed Linux device drivers and application software for Set-Top-Box platforms - experience that gave me a strong foundation in kernel-to-userspace software design.

I hold a Bachelor of Engineering in Electronics from HCMC University of Technology and I am based in Ho Chi Minh City, available for both on-site and remote engagement.

I would welcome the opportunity to discuss how my experience aligns with the needs of your team. Thank you for your time and consideration.

Sincerely,

Vu Phan
